

# D7006

0.1 – 2.7GHz SP6T Antenna Switch

## PRELIMINARY DATA SHEET

Version 1.0

## Features

- QFN (14-Pin, 2mm×2mm) Package
- Multi-Band Applications (0.1 – 2.7GHz)
- Low insertion loss and high isolation
- GPIO compatible
- High power handling

### Typical Applications

- 2G/3G/4G antenna switch
- LTE TDD/FDD receive diversity
- Portable Battery-Powered Equipment

## Product Description

The D7006 is a Single Pole, Six-Throw (SP6T) antenna switch; with high linearity performance and low insertion loss. It is suitable for LTE-based handsets, data cards, and other devices, both for receive diversity and higher power antenna switch, such as in multi-mode GSM/EDGE/WCDMA, TD-SCDMA/TDD-LTE, WCDMA/FDD, and LTE transmit or receive applications.

This part is packaged in a compact 2mm x 2mm, 14- Pin, QFN package, with GPIO compatible logic control.

**Application Schematic**

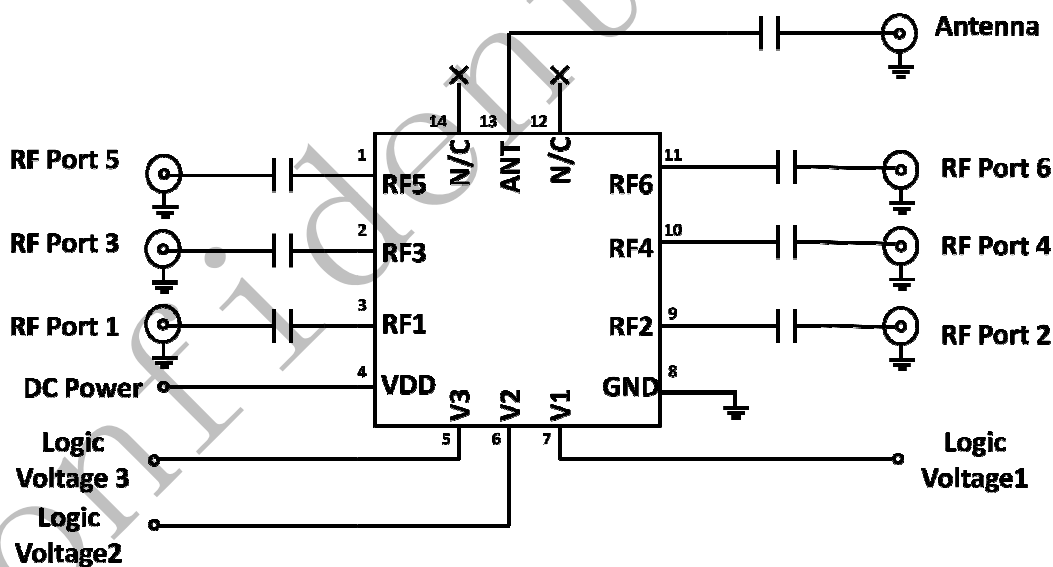

Device is intended for use in a 50 Ohm system, with a DC-blocking capacitor (any value from 5pF to 15pF) in each RF path.

**Power-Up/Down Sequence**

In order to avoid damaging the device, if VDD is not supplied at any time, the control voltages must all be set to 0V (or ground).

**ON Sequence:** First turn ON VDD, then to apply logic control signals, and last RF input.

**OFF Sequence:** First remove RF input; turn OFF the logic control signals, then turn OFF VDD.
